With growing demand in downstream market, the Active Vibration Isolation is forecast to a readjusted size of US\$ 358.4 million by 2030 with a CAGR of 6.5% during review period.

The research report highlights the growth potential of the global Active Vibration Isolation market. Active Vibration Isolation are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Active Vibration Isolation. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Active Vibration Isolation market.

Active vibration isolation systems contain a feedback circuit which consists of a sensor (for example a piezoelectric accelerometer or a geophone), a controller, and an actuator. The acceleration (vibration) signal is processed by a control circuit and amplifier. Then it feeds the electromagnetic actuator, which amplifies the signal. As a result of such a feedback system, a considerably stronger suppression of vibrations is achieved compared to ordinary damping.

Based on product type, the Springs Levelling System segment held a significant revenue share of the Active Vibration Isolation market, accounting for 58.10% in 2019.

Based on application, the Semiconductor Industry segment accounted for significant

consumption market share in 2019 with 42.79%, in terms of volume.

Asia Pacific is the largest consumption market of Active Vibration Isolation, accounting for 40.78% of the global share in 2019, in terms of volume.

The increasing adoption of Active Vibration Isolation is expected to offer lucrative opportunities for vendors. In 2019, KURASHIKI KAKO, TMC and Tokkyokiki Corporation ranked Top 3 of the revenue share in global market, accounting for 45.34% in total.
