The global Active Yaw Control Systems market size is predicted to grow from US$ 1408 million in 2025 to US$ 2337 million in 2031; it is expected to grow at a CAGR of 8.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Active Yaw Control (AYC) Systems are advanced vehicle dynamics technologies designed to improve cornering stability, traction, and handling by actively managing the distribution of torque between the left and right wheels of an axle—typically the rear axle in all-wheel-drive or four-wheel-drive systems. Using sensors to monitor parameters such as steering angle, throttle position, yaw rate, and lateral acceleration, the AYC system adjusts torque in real time to counteract understeer or oversteer, helping the vehicle follow the driver's intended path more precisely. AYC is often integrated with other stability control systems like Electronic Stability Control (ESC) and Traction Control Systems (TCS), enhancing safety and performance, especially in high-speed cornering or slippery road conditions.

Active Yaw Control Systemsare seeing robust growth due to rising integration with electric vehicles (EVs) and autonomous driving platforms, where enhanced cornering and stability are essential. OEMs are increasingly prioritizing vehicle dynamics systems that improve safety and performance, particularly in premium and sports car segments. The market is also witnessing a shift from hydraulic and mechanical solutions toward electronically actuated systems that offer better energy efficiency and seamless integration with other vehicle control modules.
