Activins, members of the TGF-beta superfamily, are disulfide-linked dimeric proteins originally purified from gonadal fluids as proteins that stimulated pituitary follicle stimulating hormone (FSH) release. Activin proteins have a wide range of biological activities, including mesoderm induction, neural cell differentiation, bone remodeling, hematopoiesis and roles in reproductive physiology. Activin isoforms and other members of the TGF-beta superfamily exert their biological effects by binding to heteromeric complexes of a type I and a type II serine-threonine kinase receptor, both of which are essential for signal transduction.

Major players in the industry are Merck Millipore, Thermo Fisher Scientific and biotechne, which accounted for 26.80%, 12.00% and 10.32% of revenue in 2019, respectively. By region, North America has the highest share of income, at 52.22 percent in 2019.
