Acute respiratory distress syndrome (ARDS) is a rapidly progressive lung disease occurring in critically ill patients. Chief complication in ARDS includes fluid leaks into the lungs, causing difficulties or impossibility in breathing. Acute lung injury (ALI) is a common condition distinguished by acute severe hypoxia. ALI comprises a wide range of changes, both clinical and radiographic, that affect the lungs through acute respiratory distress syndrome. Despite advances in the understanding of the pathophysiology and management of ALI, it is still linked with high mortality.

According to our research, the global market for medical devices is estimated at US\$
