Abstracts

The global Adaptive Damper market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

In a car fitted with adaptive dampers, the driver has the ability to change the characteristics of a car?s suspension via switchable driving modes, ranging from ?normal? or ?comfort? settings that are best suited to normal driving, or ?sport? and ?track? settings that stiffen the chassis and responses for even sportier driving.

Today the majority of new cars in the luxury and upper middle class range, including some Sport Utility Vehicles (SUVs) , have air suspension. The volume of the air in the air cushions in all corners of the car can be controlled. This is done by controlling the flow of the air in and out of the additional air reservoirs. The system includes a special air compressor, one or two air reservoirs, four shock absorber units with air springs and traditional shock absorbers, 2 to 5 stand-alone accelerometers and the electronic control unit (ECU) .
