An adaptive pressure ulcer detection device is an intelligent medical device designed to identify and monitor the development of pressure ulcers. It incorporates advanced sensor technologies, such as pressure sensors, temperature sensors, and humidity sensors, which can be adaptively adjusted according to different patient body parts, postures, and skin conditions. The device continuously collects data on pressure distribution, skin temperature changes, and moisture levels on the body surface. By analyzing these data in real - time using sophisticated algorithms, it can accurately detect early signs of pressure ulcers, assess the severity of existing ulcers, and provide timely alerts to medical staff or caregivers. This enables early intervention, reducing the risk of ulcer progression and improving patient outcomes.
