ADAS-Cockpit integration platform is a high-performance computing system utilizing cross-domain SoC chips, delivering substantial AI compute power, often exceeding hundreds of TOPS, to simultaneously execute advanced driver assistance system (ADAS) functions like sensor fusion, path planning, and automated control, while also managing cockpit features such as multi-screen interfaces, voice interaction, and AR-HUD visualization. It integrates a unified hardware and software architecture to optimize sensor and chip reuse, enhancing software efficiency and reducing hardware costs through minimized redundancy. The platform supports real-time multi-modal data processing and adheres to rigorous technical standards, including low power consumption, high reliability, and functional safety (e.g., ASIL-D). By enabling seamless ADAS-cockpit synergy and supporting OTA updates, it ensures efficient, scalable performance across diverse computational tasks.
