The global ADAS Control Modules market size is predicted to grow from US\$ 33202 million in 2025 to US\$ 75665 million in 2032; it is expected to grow at a CAGR of 12.6% from 2026 to 2032.

In 2025, global ADAS Control Module output reached about 340 million units and global capacity of around 450 million units. The average price is about USD 100 per unit, with gross margins near 27%. ADAS Control Modules are centralized or domain-based electronic control units (ECUs) that process data from multiple vehicle sensors (such as cameras, radar, LiDAR, and ultrasonic sensors) to enable real-time driver assistance functions including adaptive cruise control, lane keeping, automatic emergency braking, and parking assistance. These modules integrate high-performance processors (SoCs/MCUs), AI acceleration chips, memory, power management ICs, and automotive-grade software (middleware, perception algorithms, and safety stacks compliant with ISO 26262). The supply chain begins upstream with semiconductor suppliers (e.g., automotive processors, sensors, and memory), PCB and electronic component manufacturers, and embedded software providers; midstream includes Tier 1 automotive suppliers that design, integrate, and manufacture ADAS control modules (combining hardware and software into validated systems); and downstream consists of OEM automakers that install these modules into vehicles, followed by calibration, system integration, and aftersales diagnostics and updates.

United States market for ADAS Control Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for ADAS Control Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for ADAS Control Modules is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
