The global ADAS Platform market size is predicted to grow from US\$ 528 million in 2025 to US\$ 1078 million in 2032; it is expected to grow at a CAGR of 10.8% from 2026 to 2032.

The ADAS Platform refers to an integrated testing system for the development, validation, and calibration of Advanced Driver Assistance Systems (ADAS) and autonomous vehicle functions. The platform typically combines multiple testing modules, including dynamic or static soft targets (pedestrians, cyclists, motorcyclists, full-scale vehicle targets), robotic or drive platforms, control software, data acquisition systems, and scenario management tools. It can simulate various traffic environments and driving scenarios, enabling high-fidelity testing of vehicle perception algorithms, decision-making logic, active safety systems (such as AEB, FCW, parking assist), and autonomous driving functions. Its core advantage lies in providing repeatable, programmable, multi-target coordinated, and automated testing capabilities, making test results quantifiable, analyzable, and suitable for regulatory compliance and R&D iteration. The global ADAS platform gross margin is projected to be approximately 35% in 2025.

With the rapid adoption of Advanced Driver Assistance Systems (ADAS) and autonomous driving technologies worldwide, increasing demands for test precision, scenario complexity, and automation are driving high growth for Soft Target Drive Systems. As the core of dynamic testing, these systems can precisely control soft test targets including pedestrians, cyclists, motorcyclists, and full-scale vehicle targets across low, medium, and high-speed scenarios, supporting applications such as AEB verification, ADAS perception algorithm calibration, low-speed parking assist testing, and high-speed collision simulation. Stricter safety regulations (Euro NCAP,

C?NCAP, IIHS) regarding VRU protection and collision warning require OEMs and third-party labs to adopt high-fidelity, programmable dynamic platforms. Meanwhile, multi-sensor fusion testing and automated workflow demands further increase the need for programmable, multi-target coordinated systems with high-precision positioning and closed-loop data analysis. Therefore, Soft Target Drive Systems are not only motion control devices for dynamic targets but also a critical component of the ADAS testing ecosystem.
