The global ADAS Robotic Platform market size is predicted to grow from US\$ 440 million in 2025 to US\$ 899 million in 2032; it is expected to grow at a CAGR of 10.8% from 2026 to 2032.

The ADAS Robotic Platform is a dynamic testing platform for Advanced Driver Assistance Systems (ADAS) and autonomous vehicles. By integrating a robotic chassis, drive system, precision positioning equipment, and control software, it provides programmable and repeatable motion trajectories and speed control for soft targets (such as pedestrians, cyclists, motorcycles, and full-vehicle soft targets). The platform can simulate low-speed, medium-speed, and high-speed dynamic scenarios to verify vehicle perception algorithms, AEB (Automatic Emergency Braking), parking assistance, and collision simulation functions. Its core value lies in providing high-precision, multi-target linkage, and automated testing capabilities, making test results quantifiable, repeatable, and programmable. In 2025, global shipments of ADAS Robotic Platform were approximately 3,000 sets, with an average unit price of around USD 150,000 per set and a gross margin of about 35%.

With the rapid adoption of Advanced Driver Assistance Systems (ADAS) and autonomous driving technologies worldwide, increasing demands for test precision, scenario complexity, and automation are driving high growth for Soft Target Drive Systems. As the core of dynamic testing, these systems can precisely control soft test targets including pedestrians, cyclists, motorcyclists, and full-scale vehicle targets across low, medium, and high-speed scenarios, supporting applications such as AEB verification, ADAS perception algorithm calibration, low-speed parking assist testing, and high-speed collision simulation. Stricter safety regulations (Euro NCAP, C-NCAP, IIHS) regarding VRU protection and collision warning require OEMs and third-

party labs to adopt high-fidelity, programmable dynamic platforms. Meanwhile, multi-sensor fusion testing and automated workflow demands further increase the need for programmable, multi-target coordinated systems with high-precision positioning and closed-loop data analysis. Therefore, Soft Target Drive Systems are not only motion control devices for dynamic targets but also a critical component of the ADAS testing ecosystem.
