The global Addressable Flame Detectors market size is predicted to grow from US$ 603 million in 2025 to US$ 831 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Addressable flame detectors are advanced fire detection devices used in industrial, commercial, and safety-critical applications. Unlike traditional detectors, which trigger an alarm based on general detection criteria, addressable flame detectors are connected to a network where each device has a unique identifier (address). This allows for precise location identification of the fire source, reducing response time and improving system efficiency. These detectors use various technologies, such as infrared, ultraviolet, or a combination of both, to detect the presence of flames based on their unique radiation signatures. Their ability to be integrated into a larger, more intelligent fire alarm system makes them ideal for environments where early and accurate fire detection is critical.

United States market for Addressable Flame Detectors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Addressable Flame Detectors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Addressable Flame Detectors is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Addressable Flame Detectors players cover Siemens, Johnson Controls, Halma, Nohmi Bosai, Consilium Safety, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
