Adhesive Double-sided FCCL refers to a layer of adhesive that is coated between the substrate and copper foil. This layer of adhesive can provide a certain degree of adhesion, helping to maintain the bonding between the copper foil and substrate during the processing, and also improving the mechanical strength and stability of the circuit board. The double-sided flexible copper clad plate is covered with copper foil on both sides of the flexible substrate, which allows for the arrangement of circuits on both sides, thereby increasing the flexibility and complexity of circuit layout.

The global Adhesive Double-sided FCCL market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
