The adhesive wheel balance weight is a small metal block directly attached to the inside of the wheel hub. It is used to add appropriate weights to the part where the wheel mass is small, so that the wheel can maintain dynamic balance under high-speed rotation. This balance weight can ensure the smooth operation of the wheel during driving, reduce vibration and swing, and improve driving comfort and safety. Adhesive wheel balance weights are widely used on wheels of various models, especially for vehicles whose wheel mass center and rotation center do not coincide due to uneven material distribution or wear. By adding this balance weight, the dynamic balance of the wheel can be significantly improved, the service life of the tire can be extended, and the maintenance cost of the vehicle can be reduced.
