The global Adhesives for Automobile Lighting market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

As an essential component of the automobile, the automobile lamp plays an important role in night lighting, driving signal, fog anti-collision, steering signs and other aspects, and is an important guarantee for the safe driving of the automobile. A large number of plastic materials are used in automobile lamps, such as PP, ABS/PC, etc. to make lamp shells, and PC materials to replace traditional glass as light distribution lenses. In the application of automobile lamp bonding, firstly, the lamp sealant shall be affected by the heat emitted by the bulb. Under the corresponding high temperature environment, it must ensure that its bonding and sealing properties do not change, and at the same time, it cannot release organic gas, produce atomization, and do not turn yellow, and affect the appearance; Secondly, when the lamp sealant is exposed to ultraviolet radiation in the sun, it will not crack the adhesive layer and other aging phenomena, which requires that the lamp sealant should have good ultraviolet aging resistance; The lamp sealant will also be eroded by water vapor and rain for a long time, so its sealing performance will not be affected.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world,

Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
