Adhesives and Sealants for the Wind Industry are widely used in the manufacturing, installation and maintenance of wind turbines. Since wind power involves high safety, reliability and durability requirements, the quality and performance requirements for adhesives and sealants are correspondingly high.

Wind energy adhesives are commonly used to join and secure turbine components such as blades, hubs, towers and gearboxes. These parts need to withstand huge forces and vibrations during work, so the adhesive needs to have high strength, high adhesion, high heat resistance and weather resistance, while also meeting environmental requirements. Some commonly used adhesives include epoxy, acrylic, polyurethane, etc.

Wind energy sealants are primarily used to fill and seal joints and gaps in wind turbines to prevent outside moisture and dust from entering while also reducing noise and vibration. Wind energy sealants need to be resistant to high temperatures, ultraviolet rays, and aging, as well as high adhesion and sealing properties. Some commonly used sealants include silicone rubber, acrylics, polyurethane, etc.

The global Adhesives and Sealants for the Wind Industry market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
