## Abstracts

The global Adjustable Steel Welding Table market size is predicted to grow from US\$ 155 million in 2025 to US\$ 243 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

In 2025, global production of adjustable steel welding tables reached 59,300 units, with an average selling price of US\$2,673 per unit.

Adjustable steel welding tables are professional reference work platforms for metal welding, assembly, positioning, and clamping processes. They typically use high-strength steel plates, cast iron tabletops, or a combination of steel and cast iron structures. They achieve rapid workpiece positioning and repeated clamping through precision-machined hole systems, grid lines, support legs, connectors, positioning blocks, clamping components, lifting mechanisms, rotating mechanisms, or flipping mechanisms. Adjustable steel welding tables focus on modular, adjustable, and reusable platform equipment for welding operations. Core product forms include D16/D22/D28 three-dimensional flexible welding platforms, two-dimensional hole-system welding platforms, 5/8-inch and 3/4-inch hole-system welding tables, height-adjustable welding tables, mobile lifting welding tables, rotary/flip welding worktables, and welding fixture platform systems for robotic welding or flexible manufacturing.

From a demand structure perspective, the growth of this product category mainly comes from multi-variety, small-batch manufacturing, metal processing workshop upgrades, robotic/collaborative robot welding, vocational education, and the demand for flexible tooling in small and medium-sized manufacturing enterprises. Traditional dedicated welding fixtures still have advantages on production lines with large batches and stable products. However, in scenarios with rapid product iteration, small order batches,

complex welding structures, and frequent model changes, modular welding platforms can reduce fixture development costs, shorten clamping time, and improve repeatability. Future new demand will primarily come from automotive modification and chassis, construction machinery, rail transit maintenance, agricultural machinery, sheet metal structural parts, robotic welding training, and the upgrading of basic workshop equipment brought about by the return of regional manufacturing. The average gross profit margin of adjustable steel welding stations is 22.17%, with a single-line annual production capacity of 2400-2700 units.
