ADSS (All-Dielectric Self-Supporting) Aerial Cable is a fiber optic cable designed for long-distance communication applications in high-voltage environments such as power lines. It has no metal components and its all-dielectric design gives it the advantage of self-supporting installation in high-voltage environments, avoiding the problems caused by induced currents. The structure of ADSS optical cable usually includes an all-dielectric outer sheath and a central tube containing optical fibers. It can withstand various weather conditions and is suitable for hanging on poles or high-voltage transmission towers. It is widely used by power companies and telecommunications companies to build power communication networks and metropolitan area networks.

The global ADSS Aerial Cable market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
