The global Adult Aerosol Mask market size is predicted to grow from US\$ 73.96 million in 2025 to US\$ 121 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Adult aerosol masks are medical masks used for nebulized inhalation therapy. Connected to a nebulizer or air supply tubing, they atomize medication into microparticles that enter the airways with respiration, reducing leakage and irritation. They are suitable for adults with asthma, COPD, infections, and postoperative sputum expectoration.

Upstream components include medical-grade PVC/silicone, PP/PE, elastic webbing, metal nose clips, nebulizer cups, and tubing. Downstream applications include hospital respiratory/emergency departments, outpatient nebulization rooms, elderly and home care, pharmacies, medical device distributors, and patients with chronic diseases.

In 2024, the global average price of an adult aerosol mask was \$1.80 per unit, with sales of approximately 42 million units. The global average annual production capacity per production line was 2.1 million units, and the industry profit margin was 20-25%.

Global Future Development Trends

On the demand side, COPD, asthma, and aging will continue to drive growth, coupled with home nebulization, post-operative rehabilitation, and expansion of primary healthcare, leading to increased sales of disposable masks and kits (mask + nebulizer cup + tubing), and higher repurchase and replacement frequency.

On the product side, the focus is shifting from "usable" to "more comfortable and safer": soft-edge seals, adjustable nose bridges, pressure-reducing headbands, and lower

breathing resistance improve compliance; while strengthening droplet escape prevention, anti-fogging, and transparent visibility reduces medication residue and ensures compatibility with high-flow oxygen supply and different nebulization technologies.

On the supply side, compliance and cost are becoming more important: registration and biocompatibility, clean production, and traceability requirements raise the bar; recyclable materials, reduced plastic packaging, and regionalized production capacity are positive factors; centralized procurement promotes economies of scale and cost reduction; exports and branding are accelerating; and distribution channels are extending to DME, pharmacies, and e-commerce.
