Abstracts

The global Adult Immune Cell Bank Storage Services market size is predicted to grow from US$ 1018 million in 2025 to US$ 1826 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Adult Immune Cell Bank Storage Services refer to services—provided to adults by specialized cell repositories, biotechnology companies, or medical service institutions—that encompass the collection, isolation, processing, testing, and long-term cryopreservation of immune cells (such as lymphocytes, T cells, and NK cells derived from peripheral blood). These services utilize cryopreservation systems to maintain cell viability and functional integrity, ensuring the cells are available for future use in cell therapy, clinical research, or other medical applications, subject to relevant medical indications, technical criteria, and regulatory requirements.

The growth of the Adult Immune Cell Bank Storage Services market is primarily driven by the continued development of cell therapy and precision medicine, increasing awareness of personalized health management, and the expanding potential applications of immune cells in clinical medicine. Rapid progress in CAR-T, TCR-T, NK cell therapies, and other immune-cell-based approaches has increased the strategic value of immune cells as biological resources for oncology, immune modulation, and regenerative medicine research, encouraging both individuals and healthcare institutions to place greater emphasis on the long-term preservation of high-quality cell samples. At the same time, population aging, the growing burden of chronic diseases, and rising demand for preventive and personalized healthcare among higher-income consumers are creating additional opportunities for commercial immune cell banking. Advances in cell isolation, controlled-rate freezing, automated cryogenic storage, sample traceability, and digital biobank management are also improving storage safety,

standardization, and operational efficiency. As clinical research in cell therapy expands and regulatory and quality frameworks continue to evolve, demand for professional and standardized immune cell banking and storage services is expected to increase steadily.
