Advanced drug delivery systems are the improved methods for delivering the drug molecule to the targeted site in a more controlled manner. These methods are developed in order to improve the efficacy ratio of the currently available drugs. Delivering drug at the controlled rate, slow and targeted delivery for onsite drug release and absorption are the basis for the development of advanced drug delivery systems. Furthermore, the development of improved methods of drug delivery is preferred these days over the search for novel molecules. There are various dosage forms available by which a drug substance can be incorporated for efficacious delivery. Advancements in biotechnology and nanotechnology have significantly boosted the development of novel drug delivery approaches. Various interdisciplinary studies in the field of polymer science, pharmaceuticals, organic chemistry and molecular biology are required for the development of advanced drug delivery systems. The drug delivery system comprise of drug formulation, dosage form and mechanism of release. These advanced delivery systems have the potential of overcoming one of the major problem faced by the pharmaceutical industry for the onsite drug efficacy. Development of advanced drug delivery systems needs into consideration several factors such as pharmacodynamics, drug toxicity, immunogenicity, bio compatibility, pharmacokinetics as well as drug efficacy.
