IPS (in-plane switching) is a screen technology for liquid-crystal displays (LCDs). In IPS, a layer of liquid crystals is sandwiched between two glass surfaces. The liquid crystal molecules are aligned parallel to those surfaces in predetermined directions (in-plane). The molecules are reoriented by an applied electric field, whilst remaining essentially parallel to the surfaces to produce an image. It was designed to solve the strong viewing angle dependence and low-quality color reproduction of the twisted nematic field effect (TN) matrix LCDs prevalent in the late 1980s. AH-IPS (Advanced High Performance In-Plane Switching) developed by LG Display represents the next step beyond IPS. Boasting brighter and clearer colors as well as lower power consumption than IPS, AH-IPS is well poised to lead the LCD panel market for smart devices.
