Abstracts

The global Advanced NDIR Sensors market size is predicted to grow from US$ 966 million in 2025 to US$ 1618 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

NDIR gas sensors use the infrared absorption properties of gas molecules (e.g., CO2) to calculate their concentration. Therefore, the NDIR gas sensor is equipped with an infrared light source that emits infrared rays and an infrared sensor that detects infrared rays. The infrared light is directed at the gas in the measuring tube and part of the light is absorbed by the gas molecules to be measured. Subsequently, the rest of the infrared light hits the filter and reaches the infrared detector. Ideally, only the gas to be measured absorbs light of the corresponding wavelength. However, since the gas mixture contains a variety of gases, the absorption regions may overlap, thus enhancing cross sensitivity. The interference part must either be tested for compensation (to avoid false measurements) or avoided by clever selection of spectral ranges. With the NDIR sensor, more than 100 different gases can be detected from ppm to percentage. In many applications, this is the preferred method because the measurement method is non-contact and non-consuming.

R1: NDIR sensor products are mainly used in environmental monitoring, industrial safety, medical equipment, residential and commercial safety, power industry, scientific research and other fields. Although the industry is developing well at present, if the enterprise cannot carry out technological research and development upgrades in a timely manner, effectively expand the market, and grasp the opportunities for industry development, it will affect the market influence and operating performance of the enterprise to a certain extent. There is a risk that the company's technology and sales will lag behind due to the rapid development of industry technology.

R2: The core technology and core technicians of an enterprise are an important part of the company's core competitiveness. If the research and development results of the enterprise are compromised or infringed, it will have a negative impact on the production and operation of the enterprise. If the core technicians leave the company or privately disclose the company's technical secrets, it may still have a certain impact on the company.

R3: The market is highly fragmented and competition among enterprises is fierce. If the enterprise cannot further enhance production, R&D and sales capabilities, improve the company's management level and adjust the strategic layout in a timely manner, the business and profitability will be affected to a certain extent.
