The global Advanced Packaging Interconnect Cu Electroplating Solution market size is predicted to grow from US\$ 341 million in 2025 to US\$ 501 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Advanced Packaging Interconnect Cu Electroplating Solutions refer to specialized chemical solutions used in the electroplating process to create interconnects in advanced semiconductor packaging. These solutions are critical in forming the fine metal structures that connect different layers of a semiconductor device or package.

The market for advanced packaging interconnect Cu electroplating solution is growing along with semiconductor heterogeneous integration technology, with the core driving forces coming from three major areas:

AI/high-performance computing: The demand for through-silicon via (TSV) copper plating in 3D ICs (such as CoWoS, HBM) has surged, driving the penetration rate of high aspect ratio (>10:1) filling plating liquids;

Chiplet heterogeneous integration: The line width of the redistribution layer (RDL) has been reduced to 22µm, requiring the plating liquid to have submicron-level super-filling and nano-level thickness uniformity;

Advanced packaging capacity expansion: Giants such as TSMC, Intel, and Samsung are accelerating the construction of 3D packaging production lines, driving the annual increase in plating liquid procurement by more than 15%.

International giants dominate the high-barrier market, and DuPont, Atotech, and JCU

monopolize the high-end node (below 3nm) share with special TSV/RDL formulas. .

Chinese manufacturers are accelerating domestic substitution, and Shanghai Xinyang and others have broken through the mid-range market, and their share in the supply chain of Changdian Technology and Tongfu Microelectronics has increased. However, there is still a generation gap in cutting-edge fields, such as the mass production capacity of ultra-low stress (
