Silver has been used as a topical antimicrobial agent for hundreds of years in wound care and there is consensus that topical silver treatment in combination with good wound bed preparation can help resolve wound infection. Furthermore, silver dressings can be used as a barrier to microorganisms in wounds at risk of infection or re-infection, e.g. burns, surgical wounds, pressure ulcers near the anus, or wounds in patients who are immunocompromised, have poor circulation, or unstable diabetes. Antimicrobial Silver Wound Dressings are a relatively new family of advanced wound care dressings for the treatment of infected wounds. A silver dressing is a wound dressing impregnated with ionic silver. The ionic silver is responsible for the anti-microbial activity against infection caused by bacteria.
