Abstracts

The global AEM Hydrogen Generation System market size is predicted to grow from US$ 113 million in 2025 to US$ 189 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2025, the global production of aem hydrogen generation systems reached 8,910 units, with an average selling price of $13,000 per unit. The global annual production capacity of aem hydrogen generation systems is approximately 13,500 units, and the gross profit margin is about 26.2%. AEM Hydrogen Generation Systems are devices that use anion exchange membrane technology to produce hydrogen. They split water into hydrogen and oxygen through electrochemical reactions and are widely used in the renewable energy sector and the hydrogen economy. The upstream of aem hydrogen generation systems includes anion exchange membranes, exchange resins, and non?precious metal catalysts, among others. The midstream consists of aem hydrogen generation system manufacturers, while the downstream mainly covers applications in the electrical, energy, and chemical industries.

Currently, the market for aem hydrogen generation systems is in a phase of rapid growth. As an emerging technological route for hydrogen production via water electrolysis, aem hydrogen generation systems offer distinct advantages, including the use of non?precious metal catalysts, compact system design, and potentially low costs, which have attracted widespread attention in areas such as distributed hydrogen production, renewable energy storage, and industrial decarbonisation. Although technical feasibility has been validated in multiple demonstration projects, the industry still faces core challenges, including the durability and long?term stability of anion exchange membranes, full?system lifecycle reliability, and scalable manufacturing processes. Overall, the market is steadily transitioning from the technology validation
