An aerial survey drone is an unmanned aerial vehicle (UAV) equipped with various sensors and cameras that is used to collect data and capture images from the air for surveying and mapping purposes. These drones are typically equipped with high-resolution cameras, LiDAR (Light Detection and Ranging) sensors, and GPS systems to accurately capture and georeference data.

Aerial survey drones are commonly used in industries such as agriculture, construction, environmental monitoring, and land surveying. They can quickly and efficiently capture aerial imagery and data over large areas, providing detailed and accurate information for analysis and decision-making.

The data collected by aerial survey drones can be used for various applications, including topographic mapping, 3D modeling, terrain analysis, crop monitoring, infrastructure inspection, and disaster assessment. The drones can fly at different altitudes and capture images from multiple angles, allowing for the creation of highly detailed and accurate maps and models.
