This report focuses on Aerial Survey Services market. Aerial survey is a method of collecting geomatics or other imagery by using airplanes, helicopters, UAVs, balloons or other aerial methods. Typical types of data collected include aerial photography, Lidar, remote sensing (using various visible and invisible bands of the electromagnetic spectrum, such as infrared, gamma, or ultraviolet) and also geophysical data (such as aeromagnetic surveys and gravity). It can also refer to the chart or map made by analysing a region from the air. Aerial survey should be distinguished from satellite imagery technologies because of its better resolution, quality and atmospheric conditions (which can negatively impact and obscure satellite observation).

The global Aerial Survey market size is projected to grow from US\$ 7292 million in 2024 to US\$ 8790 million in 2030; it is expected to grow at a CAGR of 3.2% from 2024 to 2030.
