The global Aerial X-Ray Inspection market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

X-ray scanning is usually related to medical examinations, but in fact, this technology also plays a crucial role in other industries that ensure human safety. For example, X-ray machines are used for airport luggage scanning, production lines in food and drug factories, and non-destructive quality control of key mechanical components such as essential components for aircraft engines. X-rays are radioactive and can observe the interior of objects. With the help of this radiation, food quality inspectors and security personnel can more easily detect potentially hazardous substances. X-rays can also support precision mechanical operations to ensure quality. Hidden defects, structural contamination, or hazardous materials can be detected.
