Aerobic systems, often referred to as aerobic cesspool systems, are small-scale sewage treatment systems similar to septic systems, but which use an aerobic process for digestion rather than just the anaerobic process used in septic systems. These systems are often found in rural areas where there is no public sewerage and can be used for a single dwelling or a small group of households. Unlike conventional septic systems, aerobic treatment systems produce high quality secondary effluent that can be disinfected and used for surface irrigation.
