The research report highlights the growth potential of the global Aeroderivative Gas Turbine market. Aeroderivative Gas Turbine are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Aeroderivative Gas Turbine. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Aeroderivative Gas Turbine market.

The aeroderivative gas turbine is a lighter weight variation of a gas turbine. Despite being classified as a gas turbine, the fuel source for the aeroderivative turbine is not really gas. Actually, they are designed so that fuel and air are mixed and then ignited to achieve the desired output. The design of gas turbines is comprised of a compression device to facilitate the taking in of air and compressing it (the “gas” in this case) and then applying heat by means of a burner. The resulting flow of hot air is used as the source of powering the turbine. Today, these are typically designed to make use of a combustion process that is continuous as opposed to the intermittent nature of automotive combustion engines.

Global aeroderivative gas turbine main manufacturers include GE, Siemens, MHPS, etc.

As for the types of products, it can be divided into below 30MW and more than or equal to 30MW. The most common product is more than or equal to 30MW, with a share over 75%. In terms of applications, it is widely used in mobility, power generation, oil and gas. The most common application is in power generation, with a share over 70%.
