Accessory drive train (ADT) is an aircraft engine equipment used in the transmission system. It is not a part of engine's core, yet it drives important accessories, such as fuel pump, hydraulic pump, oil pump, and generator, of an aircraft. ADT performs primarily two functions: First, during startup, it transmits torque from starter to engine core for it to come in motion; and second, to transfer the mechanical energy of the engine turbine to drive the accessories of the aircraft. ADT comprises four main components: accessory gearbox (AGB), internal gearbox (IGB), external gearbox (EGB) and radial shaft. AGB acts as the heart of an ADT.

The global Aeroengine Accessory Drive Train (ADT) market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
