Aerogel Composite Ceramic Fiber is a new type of high-performance composite material consisting of three different materials: aerogel, ceramic fiber, and a substrate material. It is prepared by layering the aerogel or fiber preform with the substrate material and then processed through chemical reactions and high-temperature sintering. This composite material has many superior properties, such as low density, super insulation, high-temperature resistance, corrosion resistance, high strength, low coefficient of thermal expansion, etc., making it suitable for use in extreme environments. Aerogel Composite Ceramic Fiber is widely used in high-end applications in industries such as aerospace, electronics, energy, building, and environmental protection, as insulation materials, high-temperature resistant materials, sound-absorbing materials, filtering materials, and more.
