The global Aerogel Insulation market size is predicted to grow from US\$ 961 million in 2025 to US\$ 2212 million in 2031; it is expected to grow at a CAGR of 14.9% from 2025 to 2031.

Aerogel is a class of low-density solid gels in which the liquid has been replaced with air or gas. The structural framework of Aerogel is typically composed of silica, so silica aerogel is often referred to as simply 'Aerogel.' However, other structural materials have been used to create aerogels, including carbon, Iron oxide, etc. In insulation applications, Aerogel easily outperforms traditional fillers such as wool and fiberglass. In fact, Aerogel offers the same quality insulation with 1/3 the thickness of other insulating materials. However, Aerogel is expensive to manufacture and is rigid and brittle in its basic form, so it requires some supporting material. In addition, Aerogel withstands temperatures up to 1100 °F (593 °C), but is not suitable for extremely high-temperature applications that operate above that level.

Global key players of Aerogel Insulation include Aspen Aerogels, Cabot Corporation, IBIH, Nano Tech, Guangdong Alison Technology, etc. The top five players hold a share about 63%. Asia-Pacific is the largest market, and has a share about 58%, followed by North America and Europe with share 20% and 15%, separately. In terms of product type, Blankets is the largest segment, accounting for a share of 82%. In terms of application, Oil and Gas has a share about 40 percent.
