Aerogel Nano Insulation Film is a type of nanoscale aerogel-based insulation film, which is primarily composed of aerogel materials. Aerogel is a very lightweight, porous, low-density solid material, typically composed of over 90% air and around 10% solid materials such as silica dioxide. This material has high insulation performance and excellent thermal resistance, and is therefore widely used in the fields of building construction, aerospace, and energy storage to improve the insulation and thermal resistance of material surfaces. The Aerogel Nano Insulation Film is a thin film made from aerogel materials that can be applied to material surfaces to enhance their insulation and thermal resistance properties. Compared to traditional insulation materials, Aerogel Nano Insulation Film is lighter, thinner, softer, and more suitable for use on complex and curved surfaces.
