The global Aerogel Thermal Insulation Slurry market size is predicted to grow from US\$ 479 million in 2025 to US\$ 637 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Aerogel thermal insulation slurry is a type of coating that contains aerogel as its primary component. With aerogel serving as the main thermal insulation material, this coating is formulated by adding appropriate binders, additives, and other components to enable easy application onto various substrate surfaces, forming a thermal insulation layer. Aerogel itself is a material with a nano-porous structure, characterized by a high porosity (typically ranging from 90% to 99.8%). The air within these pores remains stationary, and heat conduction primarily occurs through the solid framework. The low solid content of aerogel results in extremely low thermal conductivity, thus imparting exceptional thermal insulation properties to the aerogel-based thermal insulation coating. Additionally, being in a coating form allows it to adapt to surfaces of various shapes and materials, providing a convenient solution for thermal insulation.

United States market for Aerogel Thermal Insulation Slurry is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
