The global Aeronautical Maintenance Frequency Converter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Aeronautical Maintenance Frequency Converter (AMFC) is a device used in aircraft maintenance to convert the frequency of electrical power. It is primarily used to convert the alternating current (AC) power from the ground power supply to the required frequency for the aircraft's electrical systems.

Different aircraft have different electrical system requirements, and the frequency of the power supply can vary depending on the location and type of aircraft. For example, some aircraft require 400 Hz frequency while others may require 50 Hz or 60 Hz.

The AMFC ensures that the power supplied to the aircraft is at the correct frequency by converting it from the ground power supply frequency to the required frequency. This is important for the proper functioning of the aircraft's electrical systems, including avionics, lighting, and other onboard equipment.

AMFCs are typically installed in ground support equipment or power units that are used to provide power to the aircraft during maintenance or while on the ground. They are designed to be portable and easy to use, allowing maintenance crews to quickly and efficiently provide the correct frequency power to the aircraft.
