Aerosol propellants are substances used in aerosol products to propel or expel the product from its container. Aerosol propellants function by exerting pressure within the container, which forces the product out through the valve when the valve is depressed. They play a crucial role in delivering various products in aerosol form, such as paints, foams, lubricants, insecticides, air fresheners, and personal care products.

The global Aerosol Propellants market size is projected to grow from US\$ 4963 million in 2024 to US\$ 6670 million in 2030; it is expected to grow at a CAGR of 5.1% from 2024 to 2030.
