Aerosol is a system in which fine solid or liquid droplets are suspended in another gas, which are present in the colloidal form. Aerosol is used to dispense medication in the form of mist droplets. After inhaling, drug droplets pass through the mouth into the bronchi, further directly into the alveoli. Since aerosol treatment directly delivers the medication into the lower airways, it is one of most effective method to treat respiratory conditions. Aerosol therapy equipment is a medical equipment to assist aerosol therapy.
