According to this study, the global Aerospace Composite Ducting market size will reach US\$ million by 2031.

Aerospace Composite Ducting serve the purpose of a conduit through which fluid is conveyed. They are widely used for fuel, oil, coolant, oxygen, instrument, and hydraulic lines. Hoses are flexible, while tubes are rigid devices used to convey hydraulic fluid, aviation fuel, water and cooling/heat exchanger fluids in aircraft.

The average annual growth rate of the Asia Pacific aviation market will be higher than the global average. The main factors that promote the development of China's aviation industry include the long-term economic development level, the expansion of the middle class population, and the increase in the number of Chinese outbound tourists.
