The global Aerospace Grade DC Contactor market size is projected to grow from US\$ 96.2 million in 2022 to US\$ 240.7 million in 2029; it is expected to grow at a CAGR of 14.0% from 2023 to 2029.

Aerospace contactors are high-performance, high-capacity circuit controls designed for aerospace applications. They are used to switch large amounts of electrical power via multiple contacts and can operate at 400 Hz. Pole and throw configurations for aerospace contactors can be single-pole, single-throw (SPST); single-pole, double-throw (SPDT); double-pole, single-throw (DPST); or double-pole, double throw (DPDT). Contacts are either normally open (NO) or normally closed. A normally-open aerospace contactor has contacts that are open or disconnected in their non-actuated (normal) position. Power to the load is shut-off when the coil is de-energized. The coil circuit can be powered from an alternating current (AC) or direct current (DC) source. Aerospace contactors that are normally closed (NC) have contacts that are closed or connected in their non-actuated (normal) position.
