Hose and tube assemblies in the aerospace industry serve the purpose of a conduit through which fluid is conveyed.

Tubes are used in stationary application; where long and relatively straight runs are possible. They are widely used in the aerospace industry for fuel, oil, coolant, oxygen, instrument, and hydraulic lines. Similarly, hoses are used to connect moving parts with stationary parts, where they are subject to considerable vibration or where a great amount of flexibility is required. In the aerospace industry, tubes are usually rigid fluid lines made of materials, such as stainless steel, Inconel, titanium, copper, and

aluminum. On the other hand, hoses are flexible fluid lines usually made of rubber (EPDM, neoprene, etc.) and Polytetrafluoroethylene (PTFE).
