The report requires updating with new data and is sent in 48 hours after order is placed.

Pre-preg is a composite material made from 'pre-impregnated' fibers and a partially cured polymer matrix, such as epoxy or phenolic resin, or even thermoplastic mixed with liquid rubbers or resins. The fibers often take the form of a weave and the matrix is used to bond them together and to other components during manufacture. This technique can be utilized in the aviation industry. As in principle, prepreg has the potential to be processed batch sizes. Despite fiber glass having high applicability in aircraft specifically small aircraft motors, carbon fiber is employed in this type of industry at a higher rate, and the demand for it is increasing.

The global Aerospace and Defense Prepreg market size is projected to grow from US\$ 7099 million in 2024 to US\$ 12540 million in 2030; it is expected to grow at a CAGR of 9.9% from 2024 to 2030.

The aerospace and defense segment dominated the Prepreg market because prepregs are used to manufacture aircraft interiors, aerospace components, aircraft flooring, cargo liners, and honeycomb and foam panels. The increase in aircraft production can be attributed to improved commercial aviation networks, growth of the tourism industry, rapid economic development, and increased air passenger traffic. Hexcel Corporation set up a new engineered core operations factory in Morocco in May 2023 to meet the increased demand for lightweight and advanced composite materials used in the aerospace industry.
