The global Aerospace Titanium Alloy Fasteners market size is predicted to grow from US\$ 2281 million in 2025 to US\$ 3870 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

In 2025, global sales of aerospace titanium alloy fasteners reached 185 million units, with an average selling price of US\$12.6 per unit. Aerospace titanium alloy fasteners refer to bolts, nuts, rivets, and specialized connectors manufactured using high-strength titanium alloy materials such as Ti-6Al-4V. They are primarily used for connections in aircraft fuselage structures, engine components, landing gear systems, and spacecraft structures. They feature high specific strength, corrosion resistance, high-temperature resistance, and excellent fatigue resistance, making them key fundamental components for achieving lightweight structures and safe, reliable connections. Upstream raw materials mainly include sponge titanium, titanium alloy bars, and precision forgings; downstream products primarily supply civil aircraft manufacturers, military aircraft manufacturers, and aero-engine companies, and are integrated into complete aircraft systems through Tier 1 structural component suppliers. The industry's total capacity is approximately 240 million units per year, with an average gross profit margin of approximately 32%. Future prospects lie in the mass production of next-generation narrow-body passenger aircraft, the development of commercial aerospace, and the advancement of domestic production of high-end engines, while additive manufacturing and precision cold heading processes improve material utilization and consistency. With the global trend of fleet upgrading and lightweighting intensifying, demand is growing steadily, and companies with material research and development capabilities, certification qualifications, and large-scale precision machining capabilities will gain more business opportunities.
