Wires & cables are often considered a commodity products and form a crucial component in an aircraft. Wires form cables, cables form wire harnesses and harnesses assembled along with other components such as conduits and sleeves, backshells, connectors, etc. form the wiring system or electronic wiring interconnect system (EWIS). Being one of the building block elements in aircraft functioning, wires & cables have ceaselessly been in demand with a gradual increase of usage in modern aircraft. For instance, Boeing 737 has ~40 miles of wires & cables. The company almost doubled the wires & cables consumption to 100 miles in its B767 program and further tripled to 310 miles in its B787 program. A similar trajectory has been recorded for the Airbus programs. Aerospace wires & cables are required to conform to several predetermined standards, distinct to each region. They are used in a wide range of applications such as avionics, lighting, and flight control surfaces.
