An Affinity Chromatography Column for Mycotoxins is a specialized chromatographic column designed for the selective separation and purification of mycotoxins from complex mixtures, such as food, feed, and agricultural products. Mycotoxins are toxic compounds produced by certain molds (fungi) that can contaminate crops and pose serious health risks to humans and animals. These columns use the principles of affinity chromatography, which relies on the specific interaction between the target molecule (in this case, mycotoxins) and a ligand that is immobilized on the stationary phase of the column.
