Control arm is a piece of a vehicle's suspension, it is a hinged suspension link between the chassis and the suspension upright or hub that carries the wheel. A vehicle's suspension is a complexity of geometry and leverage. The front suspensions in most vehicles manufactured today not only steer the vehicle, but also drive the vehicle. Front-wheel drive designs rely on a control arm to counteract the engine's torque. By placing an engine torque limiter arm between the engine and the vehicle's chassis, the vehicle is able to be easily steered while applying power to the engine. Without this arm, the vehicle would be nearly impossible to steer when a driver applies power to the wheels.

Aftermarket Automotive Control Arm companies include ZF Aftermarket and Schaeffler etc. The top 2 companies hold a share about 15%. Asia-Pacific takes up the largest sales market, with a share about 40%, followed by Europe and North America with the share about 30% and 25%.
