The global Agglomerated Diamond market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Agglomerated diamond, also known as spherical polycrystalline diamond abrasive, is a superhard abrasive with a unique polycrystalline structure. It is widely used for fine grinding and polishing of hard and brittle materials such as sapphire wafers, silicon carbide wafers and functional ceramics. The product characteristics of granulated diamond include that it is composed of finely treated diamond particles and a special binder. It has a quasi-polycrystalline structure and is prepared into spherical abrasives through a special process. It has a round shape, a small cutting edge, and is not easy to cause deep scratches on the workpiece being processed. . In addition, it also has the isotropic characteristics of polycrystalline diamond, with no fixed dissociation surface, good particle wear resistance, consistent internal and external structure of spherical particles, good self-sharpening, and stable cutting force.

United States market for Agglomerated Diamond is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Agglomerated Diamond is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
