The global Agitation Blade market size is predicted to grow from US\$ 1630 million in 2025 to US\$ 2354 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Agitation blades are the most important component of an agitator because they are responsible for transmitting the rotational energy from the motor into the tank. The rotational energy is mainly used for the discharge action, which creates a circulating flow throughout the tank, and the shearing action, which applies a local shearing force. The shape of the agitation blade can be optimized depending on whether the discharge or shearing action is desired first.

The agitation blade that best suits the purpose can be selected by determining the maximum capacity that can be achieved within the fixed power of the motor. Typical agitation blades include propeller blades, turbine blades, anchor blades, paddle blades, and ribbon blades.

United States market for Agitation Blade is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
