Agricultural full-process operation robots refer to intelligent robot systems that can cover the entire agricultural production process, have multiple operation functions and have autonomous operation capabilities. This type of robot integrates advanced technologies such as Beidou navigation, machine vision, sensor networks, artificial intelligence and big data, and can complete various agricultural production links from land preparation, sowing, fertilization, irrigation, weeding, pest control to picking and harvesting without human intervention or with little human intervention. It not only has intelligent functions such as autonomous path planning, environmental perception and identification, and automatic adjustment of operation parameters, but also can collect farmland information in real time to assist precision agricultural management and decision-making. The widespread application of agricultural full-process operation robots will help significantly improve agricultural production efficiency and operation quality, reduce labor intensity and labor costs, and promote the development of agriculture towards intelligence, scale, and green sustainability.

United States market for Agricultural Full-Process Operation Robot is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
