Agricultural heavy-duty drive rake? is an agricultural tool used for soil cultivation, mainly used in agricultural production and soil improvement. It is driven by the tractor's power input device and has strong soil breaking capabilities and deep tillage characteristics. Early power-driven rakes were mainly driven by hand or animal power, with simple structure and single function. With the advancement of agricultural mechanization, power-driven rakes have gradually developed into mechanical equipment powered by electric motors or internal combustion engines, and their performance and efficiency have been significantly improved. Currently, different types of drive rakes, such as reciprocating drive rakes, horizontal rotary drive rakes, and vertical rotary drive rakes, are widely used in the market, especially in dryland areas and paddy fields.
